1 Specification

1.1 Functional requirements

Input

1. User must be able to rate their mood
2. User must be able to describe the mood with one word / short phrase (i.e. tag)

Output

3. Average mood over a period of time i.e. day, last 7 days, last 30, overall (e.g. for calculating the average mood over last 7 days, need to calculate the averages of each day separately first)
4. Average mood associated with any particular tag

1.2 Non-functional requirements

Must have a slider that has a scale 2. Must
